SHOOTING EVENT FORENSICS

for LEGAL PROFESSIONALS

Presented by:

THE
**FORENSIC
RESOURCE GROUP** LLC.
WWW.FORENSICRESOURCEGROUP.COM

every case...every time...uncompromising excellence

January - 2015 • VERO BEACH, FLORIDA

Are you confident in your expert witnesses? Your client needs you.

Shooting events are among the most challenging cases in modern jurisprudence. If you don't understand it, how can you be sure the jury does? A complex mix of art and science must be skillfully distilled into a convincing message that the jury can understand. We'll give you the information you need to find a reliable expert witness, or properly cross examine the other side. Go beyond academics. These are experienced professionals, teaching real case-work. There is no better way to gain understanding of the forces at work, and the evidence left behind. You might even have fun while doing it!

The Forensic Process & Sources of Evidence

Learn reliable, industry accepted best practices of shooting scene field work, including: documentation, collection, preservation & analysis.

Pulling the Trigger

Learn about the entire firing sequence: Initiation, Internal Ballistics, External Ballistics, Flight Dynamics & Terminal Ballistics.

Impacts, Ricochet & Deflection

No flight path survives first contact. Learn what happens at impact, and why common methods of measurement are often unreliable.

Firearms Examination & Lab Reports

Explore the role of the firearms examiner, including tool-marks, chemical tests, gunshot residue & distance determination procedures.

Gunshot Wounds & the Medical Examiner

What happens when "the bullet hits the bone?" Explore the influence subtle wound characteristics have in medico-legal interpretation.

Reconstruction Methods

Conclusions about flight paths, impacts & sequencing must be built upon accurate field work, applied science and proper analysis. Learn how to bring it all together into a probative product.
